

Water Softener & Ion-Exchange Systems

High-Capacity Hardness Removal and Scaling Prevention.

Softeners and ion-exchange systems

Technical Specifications

Parameter	Specification / Value
Strong-acid cation resin	Resin type
Commonly up to approximately 1,000 mg/L as CaCO ₃ , subject to supplier	Inlet hardness
Typically <5 mg/L as CaCO ₃ ; lower values may require polishing	Outlet hardness
Approximately 10-40 BV/h	Service flow
Approximately 0.75-1.5 m	Resin bed depth
10-20 min	Backwash
20-60 min	Brine draw
20-60 min	Slow rinse
10-30 min	Fast rinse
Sodium chloride	Regenerant
Volume treated, hardness leakage or time	Regeneration trigger
Turbidity, iron, manganese and oil removal	Required pretreatment
