

C-Mem Zero Gravity Water Purification

Decentralized Ultrafiltration with Zero Power Requirements.

C-MEM Zero is a compact UF unit intended for raw-water and drinking-water applications. The published product information identifies approximately 20 nm pores and a membrane surface area of approximately 6 m2. Reported flow is approximately 1.6 L/min under gravity at a 2 m head and approximately 16 L/min at 2 bar, subject to water quality and temperature.

Technical Specifications

Parameter	Specification / Value
Hollow-fibre UF	Membrane type
Approximately 20 nm or 0.02 um	Membrane pore size
Approximately 6 m2	Membrane area
Approximately 1.6 L/min at 2 m head	Gravity flow
Approximately 16 L/min at 2 bar	Pump-driven flow
Turbidity, particulate matter, bacteria and some viruses	Primary removal
Source-dependent screening and sediment removal	Pretreatment
High turbidity, algae, iron, manganese, organic fouling and high solids	Main limitations
